

Polytetrafluoroethylene sand marking agent S-7300

Features and advantages:

S-7300 sand marking agent can be applied to various powder coatings to make sand marking effect.

1. The sand grain effect is fine and even
2. The addition amount is low
3. Good dispersion
4. Excellent compatibility with resin

Product specification:

appearance	Cotton-like white powder
Particle size	35 μ m (D50)
Fusing point	325 $^{\circ}$ C
density	2.5 (g/cc)
ingredient	Micropowder PTFE modified high molecular weight homopolymer

Addition amount and use method:

1. In different systems, the amount of sand grain additive is generally between 0.1-1%
2. It can be pre-dispersed by mixing and dispersing barium sulfate, calcium carbonate or talc powder before adding it to the system.

Packing: Net weight: 25kg/bucket (lined with polyethylene bag, plus hard paper bucket)

Storage: It should be stored in a clean, ventilated and dry warehouse to avoid impurities
