

Hardening wax

S-521

Features and advantages:

S-521 polyethylene wax is mainly used for hardening and wear resistance of high-end powder coatings, so that powder coatings have better wetting and leakage performance.

1. Help disperse the makeup filler
2. Lubricating propeller, good friction resistance
3. Increase surface scratch resistance
4. Environmental protection tasteless, no black smoke

Product specification:

appearance	White granular powder
hardness	<2.0dmm
Fusing point	115°C
density	0.98 (g/cc)
Molecular weight	3000-4000
ingredient	Modified high molecular weight

Addition amount and use method:

In the production process of powder coatings, the amount of polyethylene wax added is generally between 0.5-2%

Packing: Paper-plastic composite bag, net weight: 25 kg/bag
