

PP special treatment agent

P-1100

Features and advantages:

P-1100 is specially used for the treatment of water on PP plastic substrate, has good adhesion to most of PP, does not need to be treated on PP material, can be sprayed directly, economical and practical, applicability is a variety of PP plastic private color coating, can be made into a variety of PP varnish, color paint.

Product specification:

appearance	Yellow cloudy liquid
Solid fraction (%)	35±2
Viscosity (mpa.s 25℃)	200-600
Acid value (mgKOH/g)	≤10
solvent	Toluene/xylene/cyclohexanone

Usage: Dilute xylene and add a small amount of ketones, spray directly on the substrate with three to five times the solvent, and paint and PU varnish can be applied after surface drying (30-20 minutes).

Packaging: 25KG/200kg coated plastic drum, normal temperature (below 30℃), stored for half a year without deterioration.

Note: It is recommended to use toluene, xylene, cyclohexanone, MIBK as the diluent, if there is a drawing phenomenon can be appropriate to add some cyclohexanone, MIBK.
