

Anti-shrinkage hole leveling agent

RF-7504

Features and advantages:

This product is used to control the surface tension of liquid phase materials. Mainly used for a variety of coating resin coatings. Reduce the surface tension of the system, promote leveling, improve substrate wettability, prevent shrinkage, and improve surface smoothness and luster. It is a general levelling agent with good performance. Applicable to thousands of high temperature requirements of solvent-based, solvent-free, water-based systems.

1. this product in most systems, recoating should not be a problem.
2. has a good compatibility, can be in water, alcohol, alkanes, aromatics can be diluted at any rate.
3. this product has a special effect on PU leather anti-floating color and deepening.
4. especially suitable for high temperature system.

Product specification:

appearance	Light yellow transparent liquid
Active ingredient	100%

Viscosity (mPas, 25°C)	600-1200.
Water solubility	water-soluble
Surface tension	< 22
ingredient	Special modified polysiloxane

Applications: oil-based system, solvent-free system, water-based system

Recommended dosage: 0.05-1.0% of the total formula

How to use:

It can be added at any stage of the production process. In order to facilitate the addition can be diluted with a suitable solvent

Packing: 25KG/ barrel, 200KG/ barrel
