

Water-based hammer marking agent

RT-3032

Features and advantages:

Hammer pattern agent is a special surface adjustment agent, which can make the aluminum powder pattern uniform, exquisite and strong three-dimensional sense. And because its molecular chain structure is quite stable, the pattern will not change greatly during storage.

Product Specifications:

appearance	Colorless transparent liquid
Active matter	10%
Make up	Polysiloxane solution

Recommended dosage: Total formula 0.05-0.5%

Usage: Add in paint mixing stage.

Packing: Net weight 25Kg/ barrel.

Storage: Keep away from heat source, fire source and light.

Matters needing attention

1. do not make hammer stain other products.
2. with the increase of the amount of RT-3032, the pattern from coarse to fine.
3. different batches, different materials, different construction conditions will cause a small gap in hammer paint, this feature is a normal phenomenon for all hammer agents and hammer paint, it is best to spray each batch to adjust the uniformity of the pattern
