

# Polyester defoamer

## RP-6192

### Features and advantages:

1. With excellent anti-foam effect, it can inhibit and eliminate the bubbles produced in the production, canning and construction process of the paint, and prevent the production of pinholes.
2. It is a non-silicon defoamer, with other types of defoamer incomparable compatibility, good compatibility with various resin systems, and will not affect recoating, especially suitable for medium and senior varnish systems, without turbidity.

### Product specification:

appearance	Colorless transparent liquid
Effective portion	50%
Make up	Polyester defoaming polymer (non-silicon)

### Application field:

Solvent-based coatings, photocurable coatings, solvent-free coatings, printing inks, adhesives, etc.

### Recommended dosage:

Total formula 0.1-0.8% (Please test the most appropriate amount before use)

### How to use:

In order to obtain full defoaming effect, it is recommended to add before grinding. If it is added later, it should be mixed at a high enough shear

---

force to ensure a good distribution of the defoamer.

**Packing:** 25KG non-recycled blue plastic drum.

**Storage:** Keep away from heat source, light source and away from light.
