

Defoaming agent

RP-6302

Features and advantages:

Defoaming agent is mainly used in emulsion synthesis, high gloss pure acrylic, acrylic and acrylic paint, flat paint, varnish, all kinds of paint, architectural paint, etc.

- 1, excellent system compatibility
2. Long-term storage stability
3. Both rapid defoaming and long-term foam suppression

Product specifications:

Appearance	Light yellow opaque liquid
Viscosity (25°C)	500~2000mPa·s
Solid content	>95%

Application:

emulsion polymerization, acrylic paint, acrylic paint, water-based paint, etc.

Usage:

mix and disperse for a certain period of time before use, can be added in the grinding stage or paint blending stage. For different production process systems, it is recommended to conduct a small test in advance to achieve the best defoaming effect. It is recommended to test compatibility before use to achieve the best results.

Packing:

25kg/ drum

Note:

This product has not been tested or stated as intended for medical or medicinal use.
