

Drying Additive

T-12

Features and advantages:

1. The catalyst is organotin drier and has high reactivity, so it is mostly used for polyisocyanurate

The formula for the reaction.

2. The product has good thermal stability and no effect on paint storage.

3. The product is used as a primer to significantly speed up the drying and shorten the packaging and paste time of the coating.

Product specifications:

Appearance	Colorless or light yellow liquid
Tin content	≥18
Constituent	Highly active organotin compounds

Recommended dosage:

0.1 -- 0.8% of total formula

Packaging:

25kg non-recycled plastic drum. The product is not completely used, the lid must be tightly closed after use.

Storage:

keep away from heat and fire and keep away from light.
