

Defoaming agent

RP-6213

Features and advantages:

RP-6213 can be used in water-based formulations, varnishes and paint formulations, no air spraying, mixed air spraying, eliminate foam produced in the production process, can prevent microbubbles, prevent pinholes caused by air retention, suitable for high viscosity or high solid content systems.

(1) Excellent system compatibility

- (2) Long-term storage stability
- (3) Both rapid defoaming and long-term foam suppression

Product specifications:

appearance	Milky liquid
Viscosity (25°C)	1000~4000mPa·s
Solid content	25%±1
PH	6.0~8.0

Application scope:Architectural coatings, printing inks and light oils, wood and furniture coatings, industrial coatings leather finish

Usage:Mixing and dispersing for a certain time before use can be added in the grinding stage or paint mixing stage. For different production process systems, it is recommended to

conduct a small test in advance to achieve the best defoaming effect and control the appropriate dosage. It is recommended to test compatibility before use to achieve the best effect.

Packing: 25kg/ 50kg/ 200kg plastic drum or 1000kg IBC drum **Storage:** store at room temperature $(5^{\circ}C-40^{\circ}C)$, avoid direct sunlight, warranty period of 6 months.
