

Defoaming agent

RP-6080

Features and advantages:

It is a highly effective defoaming and defoaming agent for solvent and solvent free coating systems. Effective in production and processing, especially recommended for epoxy resin systems.

Product specifications:

appearance	Turbid liquid
composition	Foam breaking polymer and polysiloxane solution
Refractive index (20°C)	1.448
solvent	Hydrocarbon mixture
Flash point	95 °C
Density (20°C)	0.81 g/ml

Application: industrial coatings, architectural coatings, wood and furniture coatings, especially recommended in anti-corrosion coatings.

Dosage: 0.2-0.8% Dosage of auxiliaries (form of supply) based on total formulation.

Usage: To get the best defoaming effect, defoaming agent should be added to the abrasive. If added at a later stage,

shear forces must be applied high enough to ensure good dispersion and thus prevent shrinkage.

Packing: 25kg/ drum.

Storage: Avoid direct sunlight
